

# Reducing the Spread of Pathogens with Advanced UV-C Technology

## UV ANGEL ADAPT™

SURFACE PATHOGEN CONTROL

A growing volume of science points to shared workstations as fomites for pathogen transmission. Studies have shown the presence of HAI-related pathogens on 1 in 4 frequently touched surfaces.

Reduce the risk of spreading viruses and bacteria with an intelligent, automated UV-C that safely and continuously detects and neutralizes surface contamination. It's called the UV Angel Adapt™.

### High Touch, High Risk

The spread of contamination has become a critical problem in environments from hospitals to corporate offices, retail locations, restaurants, coffee shops, dental clinics, hotels and more.

### How it Operates

Using an intelligent, automated UV-C light treatment platform, the UV Angel Adapt™ continuously monitors when surfaces have been used and safely treats them hundreds of times a day with no assistance from staff. The moment a potential threat is detected on surfaces, the UV Angel Adapt™ neutralizes it at a cellular level, at rates greater than 99%.

## UV Angel by the Numbers

### Features

- **Effective** and **Unobtrusive**.
- **IOT Connectivity Onboard** (Wi-Fi & BLE).
- **Streams** real-time data.
- **Accelerometer & Gyro** allows for better understanding of the surrounding environment.
- **AI Algorithms** detects typing and manual cleaning.

**Coming soon!** Built-in battery allows for uninterrupted function.
